WARNING: When using speech recognition on an ongoing basis, you should endeavour to maintain a healthy voice. The possibility of vocal strain is very real if you speak quite a bit throughout the day.

In order to prevent potential stress to the vocal cords, you should keep them lubricated. You can achieve vocal cord lubrication most effectively by drinking large amounts of water. Since a couple of hours must pass for the vocal cords to absorb the water you drink, you should begin drinking water early in the morning, or as soon as you wake up.

Avoid drinking liquids with caffeine, alcohol, or sugar as each of these substances dehydrate your body and your vocal cords, leaving you susceptible to vocal strain. Room temperature water is the best to drink; therefore, you may wish to keep a jug of water near your desk at all times. Refill your cup or water bottle from the jug and when the jug is empty, refill it from your main water source.

Nuance®
Dragon®
Professional

DRAGON
MEDICAL PRACTICE EDITION

Dragon is licensed per user, and not per machine/computer. This is an extremely flexible licensing arrangement and takes into account the reality that most individuals have a main PC, a notebook, a home computer or may have several offices. If an assistant is performing corrections, an additional license is not necessary.

Please contact Speakeasy Solutions Inc. should you require additional licenses of Dragon.
