Dragon Professional 15 Comparison

There are three Dragon Professional products available, and they are:

- Dragon® Professional Individual
- Dragon® Professional Group (Single User)
- Dragon® Professional Group (Enterprise)

Most individuals (professionals and Canadian lawyers) would be satisfied with **Dragon® Professional Individual**. This product offers the creation of advanced voice commands for streamlining efficiencies, vocabulary optimization, and the transcription of individual voice files (usually from a digital voice recorder) into text.

However, for those individuals wishing to take advantage of the Roaming Dragon User Profile feature, which enables an assistant to proofread and improve the main speaker's accuracy, then **Dragon® Professional Group Single User** would be a considerable benefit.

For those individuals who require the use of Dragon via a Citrix virtualized environment, or the batch transcription of voice files (usually from a digital voice recorder) into text, then either **Dragon® Professional Group Single User** or **Dragon® Professional Group (enterprise)** should be considered.

Dragon® Professional Group (enterprise) is useful for those who wish to implement an enterprise deployment, with the option of a maintenance agreement. A volume license purchase is available. There is also the option of managing various aspects of each user's Dragon User Profile such as voice commands, word lists, and more via Nuance's Management Centre, which is hosted in the United States of America¹.

Should you have any questions or desire any clarification on which product would be most suitable for you or your organization, please do not hesitate to contact Alexandria of Speakeasy Solutions:
