

Streamline legal documentation.

Speed legal documentation turnaround times, eliminate transcription bottlenecks, and focus on billable tasks with Nuance® Dragon® Legal Group.

Manage legal documentation more efficiently and cost-effectively, with Dragon Legal Group, and quickly and accurately prepare legal documents, case files and briefs—in the office or visiting clients—all by voice. Reduce or eliminate transcription time and costs. Or use powerful customizations to streamline repetitive, multi-step processes for additional productivity gains. With a next-generation speech engine leveraging Nuance Deep Learning technology, Dragon achieves high recognition accuracy while dictating, even for users with accents or those working in open office or mobile environments.

Improve productivity and costs with fast dictation and transcription.

Enjoy accurate recognition of legal terms.

Dragon Legal Group is made even more accurate by a built-in vocabulary trained using more than 400 million words from legal documents. This means legal professionals can dictate contracts, briefs and other documentation 3 times faster than typing, with up to 99% recognition accuracy right from the first use.

Eliminate or reduce transcription time and costs.

Reduce dependencies on outsourced transcription services, or reallocate support staff to more high-value tasks. Using Dragon, legal professionals can transcribe recorded notes or voice files of another single speaker into text quickly and easily back at the PC. Dragon's Auto Transcribe Folder Agent (ATFA) also makes it easy to transcribe batch files of audio recordings for additional time and cost savings.

Automate repetitive workflows to improve efficiency.

Having to type repetitive content or perform multi-step tasks is a drain on productivity. With its powerful voice command capabilities, Dragon makes it easy to automate these tasks. For example, create custom voice commands to insert standard clauses into documents, or create time-saving macros to automate multi-step workflows by voice.

Get documents done from anywhere.

Dragon's seamless synchronization across PCs, iOS® and Android™ devices through the cloud means you can keep up with work from any location. Use Dragon on popular touchscreen PCs, or sync with Dragon Anywhere Individual, Nuance's cloud-based, professional-grade mobile dictation solution and get documents done anytime, anywhere.

Benefits at-a-glance

- Boost productivity with faster document turnaround
- Eliminate legal documentation bottlenecks
- Cut expenses by reducing reliance on outsourced transcription services
- Increase efficiency with custom voice commands that execute multi-step processes
- Spend less time on documentation and more time on client service
- Reallocate support staff to higher-value tasks

System requirements

- Windows 7, 8.1, 10 (32- and 64-bit), Windows Server 2008 R2, Server 2012 R2, and Server 2016 (64-bit)
- RAM: Minimum 4GB
- An Internet connection for product download and automatic product activation (a quick anonymous process)

Single-user license

Reduce repetitive stress injuries (RSIs).

Reduce the symptoms of RSIs or proactively prevent further injuries. Legal professionals can create documents and perform other computer tasks - all by voice, and reduce the physical strain of typing.

Empower legal professionals with Nuance PowerMic.

Great for high dictation or on-the-go situation, this high-quality, handheld microphone makes it easy to switch back and forth between dictation and other work, while not being tethered to the computer. Users can dictate, edit, navigate and review documents, as well as program buttons to automate steps such as advancing sequentially through form fields.

Benefit from roaming profiles.

With roaming profile, it's easy to back up and use your Dragon profile from any computer. Store user settings such as custom words, custom commands, and PowerMic settings and start dictating on any shared PC.

Work in Citrix® virtualized environments.

Deploy on Citrix XenApp® or Citrix XenDesktop® servers where the target application resides, enabling users to dictate from workstations that do not have Dragon installed on them.
